

VIPER rep ranking

A weekly score that decides who gets the best leads

Every rep gets a score from 0 to 100, every week.

The score sets a rank from 1 to 5, where 5 is the best. The rank decides who gets the best leads.

What it rewards, in one line:

Take the appointments we give you and turn them into installed jobs.

Rank 5 is now the best

The scale flipped. The old system had 1 as best and 3 as worst.

Higher number, higher rank. Rank 5 is the top.

What your rank gets you

Rank decides your leads, not your schedule.

More leads

Higher ranks get more company leads.

Better leads

Top ranks get the highest-quality leads.

Confirmation priority

Confirmed, ready-to-run appointments are matched to top reps first.

Your performance sets your rank. The best leads go to the best closers.

Confirmation priority: how appointments are matched

The best appointments go to the best reps, set by the Confirmation Formula.

Appointment priority 1 is dispatched first, 6 is last. Confirmed always beats unconfirmed.

1

Appointments

Sorted 1 to 6 by the Confirmation Formula, then by lead score.

Reps

Sorted by rank, then by Viper score.

Matched top to top: the best appointments reach the best reps.

What the score is made of

Five measures, weighted. They add up to 100.

50

Effective rate

Do you close the appointments we give you?

30

Pull-through

Do your signed deals actually get installed?

10

Attachment

Do you add battery or roof to the deal?

5

Pricing

Do you sell at our target price?

5

Self-gen

Do you bring in self-gen and referral deals?

Total **100** The bigger the number, the more it moves your score.

How each measure is calculated

Each is a simple ratio, scored against its target, then weighted into your score.

		what you got		out of
50	Effective rate	Approved contracts	÷	Appointments we gave you
30	Pull-through	Signed deals that installed	÷	The deals you signed
10	Attachment	Roof and battery add-ons	÷	Solar contracts
5	Pricing	Contracts at target price	÷	All your contracts
5	Self-gen	Self-gen and referral deals	÷	All your contracts

Pull-through ties each signed deal to its own install date, not all installs against all contracts.

Attachment counts by category: roof and battery each add once, no matter how many (up to two add-ons).

How the score adds up

Each rate is scored against its target, then weighted. Hit target, earn full weight.

	TARGET (full marks)	WEIGHT
Effective rate	30%	50
Pull-through	80%	30
Attachment	30%	10
Pricing	100%	5
Self-gen	75%	5

Your rate ÷ its target (capped at 100%), times its weight. Add the five = your 0-100 score.

Example: 26% effective ÷ 30% target = 87% of 50 = 43 points.

The big picture: 80 and 20

Group the five, and the message is simple.

80%

Convert and install the leads we give you

Effective rate 50 + Pull-through 30

20%

Profit and hustle

Attachment 10 + Pricing 5 + Self-gen 5

80 of every 100 points come down to one thing: turning our appointments into installs.

What counts

Three ground rules.

Company leads only

Your score is about the appointments we hand you. Self-gen and referral are the one exception, feeding only their own 5%.

Dispatched appointments

Every appointment we gave you, minus DQs and verified homeowner no-shows. A rep no-show or a cancel at the door still counts against you.

A level playing field

Viper removed the lanes. You're ranked against every rep in the regions you run, regardless of sales channel.

How far back we look, and why

We don't judge deals that are too fresh to count.

Grey = recent stretch we leave out. Bars not to exact scale.
New reps (under 180 days on leads) are left out of pull-through entirely.

Why skip the last 2 weeks? A deal you just signed hasn't cleared approval yet, and the newest days swing too much to be fair.

Why skip the last 4 months? An install takes time. Every deal gets a fair shot to install before pull-through counts it.

From score to rank

How your 0-to-100 score becomes a 1-to-5 rank.

Top scores, top ranks. Inside your region pool, the highest scores earn the highest ranks. No sales channel, everyone in the region together.

Best rank across regions. Run leads in several regions and you keep the highest rank you earn.

Rebalanced every week. Ranks reset weekly, so a 4 means the same thing across the company.

For example: a score of **79** lands in the rank-4 tier.

Guardrails: floors and a cap

Most reps earn their rank outright. A few cases get a floor or a cap.

Hall of Fame 1,000+ career installs

Always 5

DM and above District managers, regionals, VPs

At least 4

ADM / Training Manager Assistant district and training managers

At least 3

New hire First 40 appointments or 8 months

At least 3

Low volume Too few at-bats (under 15 / 20 / 30 by channel)

Caps at 4

A floor is a minimum, not a ceiling. Earn higher and you keep it. Only Hall of Fame is automatic.

In practice: one rep, one week

Real numbers from the last run, name withheld.

Each number is scored against its target, then weighted. Near target on the big two is what carries the score.

Viper score

79

Rank 4

up from 3
the week before

Closes and installs our leads well, which is the 80% that counts. Attachment is the gap. Net: a solid rank 4.

Latest run: dispatched appointments read Mar 7 to May 22, installs measured on deals signed Jun 2025 to Feb 2026.

Why it's steadier than before

Less volatile, by design.

	BEFORE	NOW
Pull-through	Short window, swung by install-date changes	Full year, last 4 months set aside
Effective rate	Heavy 30 days, ranked monthly	90-day average, ranked weekly
Weighting	64% on close rate alone	Spread across 5 measures, with floors
Sit rate	Scored directly, 8%	Not scored on its own

A steadier score rewards consistency and gives every rep a fair shot to climb.
